Education

Algonquin College

Completed: April 2026

Diploma of Computer Programming

Ottawa, ON

- Courses: Software Engineering Practice, Applied Machine Learning, Operating Systems, Computer Architecture, Model-Based Programming, Algorithms and Data Structures, Intro. to Software Engineering

Work Experience

CatchaBite Food Delivery

May 2023 – Present

Lead Product Engineer(Founder)

Toronto, ON

- Architecting a multi-vendor delivery ecosystem for the African market, engineering cross-platform React Native apps for customers, riders, and vendors.
- Developed scalable backend services using **Node.js** and **GraphQL**, optimizing data persistence with **PostgreSQL** and **MongoDB** to handle high-concurrency traffic.
- Implemented **Redis** caching strategies and specialized logistics logic to ensure sub-second response times for real-time order tracking and vendor management.

McEwen Mining Inc.

Sept 2022 – May 2023

Jr. Data Engineer

Timmins, ON

- Engineered automated **SQL** and **Python** scripts to clean and manage large datasets from **ERP systems (Oracle Fusion)** and **IoT sensors**, ensuring **99%** data accuracy for operational reporting.
- Processed and analyzed high-dimensional data from **Spectral Imaging Machines** using **Python (NumPy/SciPy)**, assisting geologists in mineral identification and ore grade **reconciliation analysis**
- Analyzed **drilling rig sensor data** for predictive maintenance and collaborated with geologists to perform **reconciliation analysis**, standardizing reporting processes across engineering teams.

Ozon Telecom

Sept 2021 – Jan 2022

Software Engineer (Co-op)

Remote

- Programmed and deployed a **Python**-based data migration pipeline on **Azure**, achieving a **50% reduction** in transfer time for **100+ terabytes** of critical business data
- Centralized a **SQL** database infrastructure on **AWS**, enhancing data accessibility and security for **30+ stakeholders**, resulting in a **30% improvement** in query performance across the organization
- Improved backend data efficiency and reliability as measured by a **20% reduction** in manual processing time, by automating database queries and data validation using **Python**.

Projects

AntiScamurai | Website

Python, JavaScript, React, Spring Boot, PostgreSQL

- Developed and deployed a Discord security bot featuring an advanced **reputation and risk-scoring system** utilizing **PostgreSQL** for data storage, **Spring Boot** for a **RESTful API** backend, and **ReactJS** for the user interface
- Implemented automated moderation workflows including captcha verification, user quarantine, and real-time risk evaluation to proactively prevent malicious users from accessing Discord servers.
- Deployed a production-ready Discord bot actively used across multiple servers, demonstrating reliability and real-world impact.

StorePOS | Github

Electron, React, Node.js, SQLite

- Developed a desktop POS system supporting **sales processing**, **inventory management**, and **transaction tracking** for retail environments.
- Implemented core features including **cart management**, **barcode scanning**, **tax calculations**, and a **SQLite-backed API** for persistent data handling.

Technical Skills

Languages: Java, Python, TypeScript, JavaScript, C++, C#, PHP, HTML5, CSS, Go

Developer Tools: Git, Docker, Azure, AWS, Firebase, Postman, Jira, VS Code, Figma

Libraries/Frameworks: React, React Native, Next.js, Vue.js, Laravel, Electron.js, Express.js, Django, Spring Boot
